

Muhammad Muazen

Syria, Lattakia (Remotely Available) | muhammadmuazen1@gmail.com

I am a passionate Junior Penetration Tester with a solid understanding of cybersecurity fundamentals and practical skills in penetration testing. My journey has equipped me with proficiency in Python, C#, and C, which I actively use to develop scripts and tools for identifying and analyzing security vulnerabilities. My experience extends to both Linux and Windows environments, where I regularly apply my knowledge using many famous tools like Burp suite, Metasploit framework, Wireshark and many more to enhance systems security. I am eager to continue learning and excited to contribute my growing expertise to a professional team.

Education

Lattakia University: Systems and Networks Engineering (2020 - Present)

Expertise

Self-Study

Through dedicated self-study, I have gained a comprehensive understanding of cybersecurity, networking, and operating systems. My journey has been supported by the completion of several industry-recognized certifications, including CCNA, MCSA, LPIC Essentials, LPIC-1, OSCP, OSEP, OSA, eWPT, eWPTX, and the GIAC Web Application Penetration Tester. Additionally, I have earned the MalDev Academy Certificate, further enhancing my skills in malware development and analysis. These certifications have equipped me with advanced knowledge in ethical hacking, vulnerability assessment, network security, and web application testing, contributing to my expertise as a penetration tester.

Capture The Flag

During my time on the TryHackMe platform, I achieved a top 1% ranking, engaging with a variety of challenges, including network exploitation, web application security, and privilege escalation. I developed advanced skills in penetration testing and vulnerability assessment. My experience included working on notable labs and rooms where I applied and refined my understanding of sophisticated attack vectors and security techniques.

For more details on my TryHackMe accomplishments and activity, you can view my profile here:
